

WORKS PROGRESS ADMINISTRATION

OF WEST VIRGINIA

312 Smallridge Building,
Charleston, W. Va.

ALDERSON
ADMINISTRATOR

November 18, 1937.

Pocahontas Co

Postmaster Hillsboro,
West Virginia.

Dear Sir:

A few facts connected with the history of the house in which Pearl S. Buck was born are needed by the Federal Writers' Project for the completion of the Hillsboro story. I shall be greatly obliged if you will supply the answers to the following questions:

Who are the present owners and occupants?

Is it open to visitors? *Yes, P. Edgar*
would deny you if you want in

Has it been changed materially since its construction, inside or outside? *Woh day*
much

Is there anything of particular interest to be seen there? *just*
a plain country house

Thanking you for your kind cooperation, I am,

Very truly yours,

John L. Stender
John L. Stender,
State Director
Federal Writers' Project.

MISCELLANEOUS

Civil War

Shortly after the Civil War a political orator waved the bloody flag at Edray and urged the people to vote the way they had shot. Rev. John Waugh replied to him something like this: "The war is over. It is our duty to promote peace. I had a son in the Confederate army and I had a son in the Union army. If the hostilities continue, the factions will be holding their basket dinners in different hollows." This was the last effort on the part of any speaker to make a bloody flag speech in this county .

From 1926 W. Va. Blue Book

* (red) The Civil War marked the division line in this county between the old and the new. The thinking men in the county were especially interested in the 1870 in introducing appliances that the soldiers had observed on their campaigns. This was the line of demarkation between the sickle and the grain cradle, the flintlock rifle and the repeating rifle, the introduction of the steam engine and the portable sawmill to take the place of the water turned mill, kerosene lamps for candle light. M. A. Friel of near Clover Lick owned the first kerosene lamp ever in the county in 1865.

But more than anything else that spurred the business men of Pocahontas County was the success of James E. A. Gibbs, of Marlinton, who after the Civil War found he was rich because of the success of a chain stitch sewing machine he had invented just before the war.

The older citizens of today have seen the adoption of such things as the steam engine, sewing machine (1872), turbine wheel, telephone (1898), printing ships (1882) bend mills, and many more. On the other hand, during this period, we lost a great many skilled workmen such as candlemakers, farriers, shoemakers, weavers, spinners, taylors, harnessmakers, saddlers, stonemasons and the like. This was especially true after the covered wagons began to make regular trips to bring in freight from Millboro, Staunton, Huttonsville, and Ronceverte and with the coming of the railroads in 1901 they became fewer and fewer.

The industrial developments were gradual. This county developed along with the internal developments of Virginia through the building of turnpikes in the 1830-50.

SECRET
At this time our natural resources were practically untouched. Agriculture and grazing of live stock were the chief industries.

*(green) Agriculture was the chief pursuit of the early settlers of Pocahontas county. Because travel was difficult and transportation facilities were meager, the settlers were compelled to be practically self sustaining. Gardening, together with the growing of small patches of buckwheat, corn, beans, and potatoes, largely constituted the early farming enterprises. Later cattle, sheep, and hogs were introduced principally for mildm wool and meat to supplement the supply of wild game and fish that was an important source of food and clothing. Trapping furnished furs and skins that could be traded for the few supplies not produced at home. The bottom lands were generally devoted to grain and hay, and the adjacent slopes were cleared and used for pasture. The land has always been farmed, for the most part, in small tracts by the owners. Few slaves were owned and the freeing of them did not affect agriculture.

Between 1880 and 1890 the production of all grains and crops increased materially. The total acreage in all grains has remained fairly constant since 1890, but acreage in certain crops have fluctuated considerably. Corn has been in the lead at all times followed by either wheat or oats. Hay increased from 10,817 acres in 1879 to 15,138 acres in 1889 and has increased very little since, but the acre yield has been more than doubled. Since 1900 the total number of hogs and cattle has dropped off slightly, but the number of sheep raised and the production of wool, dairy products, poultry and eggs have increased considerably. The acreage occupied by potatoes and garden crops most of which are grown for home use, fluctuates from year to year.

Between 1880 and 1910 the number of farms steadily increased from 682 to 1,198, the latter figure being only 3 below that given by the 1930 census report. As the size of the farms had decreased slightly in the last 50 years, the total amount of land in farms has remained fairly constant.

Poor transportation facilities, long distance from markets, and the need of cash income forced the farmers of this section in early days to turn to the production of beef. Even now with railroad shipping available, it remains the largest source of income. Formerly all cattle, when ready for market, were driven overland. To outside markets, principally pittsburg, Baltimore and Clarksburg. Many were sold as feeders

the Shenandoah and Patomac Valleys to the east and were later marketed from there.

Practically all the cattle were sold grass fattened.

Farming methods and management were governed largely by the steepness of the land and the size of the farm. Soon after transportation facilities became available the larger land owners brought in mowing machines, reapers, buggy rakes and wagons, but on the smaller patch farms and on steep or stony lands, much of the work was still done by hand, and continues so even today.
